

It is assumed that any unknown size of particular attribute, it is set to either size of 30 or 50 as airtnt is international business and number of size of attribute maybe affected when customer from different country has used certain format that the database design recognize is different. Therefore, attribute as such assume user of database to enter valid value accordance to document it referring to or customer input.

For Y = unique identifier for payment details, invoice number is used as Y to reference a document that store information of good and service provided, and record transaction between seller and buyer.

Company can either manually write out with hand or use software to create an invoice to keep track of sales record. However, people and businesses have found that paper documents are not competent as electronic invoicing in modern era because electronic invoicing are much easier to be used (Hayes, 2019).

To protect company from legal issue and record keeping purposes, companies should keep evidence of all sales with invoice document. Invoice enable tracking for payment details such as amount charges to customer for good and service, date of a transaction, employees make sales and the items employees sell (Forneris, n.d, " What is an invoice", n.d).

Invoice number is a unique identifier of invoice which is handy for internal and external reference (Hayes, 2019). Therefore, an invoice number will only be issued once in a lifetime for any customer and chances of invoice number to appear twice or more is zero, and it is suitable to be unique identifier for payment details.

For X=unique identifier for identity verification, government ID is used because Airbnb has used government ID as identity verification and it is used because it is best possible way to verify a person is whom first registered and likelihood of a person registered with same government ID is not likely and it contains a photo which enforcer in airtnt can verify that person with ease. Furthermore, airtnt will respect privacy of user without need of concern as Airbnb which is parent of airtnt should follow the footstep and guideline of parent. ("How does it work when Airbnb asks for an ID",n.d).

X can accept passport, driving license and identification card assuming airtnt have a customer that hold any of these identification document. A passport can be used as one of the most reliable forms of identification and prove your citizenship(Zubrick,2017). Generally, driving license can be used for identity verification in Australia (*Financial Transaction Reports Regulations 1990, 2015*). which is alternative to identification as opposed to Malaysia's mykad. ID cards help associate a lot of information with a specific person and National ID cards prevent forged identities (Pearson,n.d). Thus, the advantages mentioned above helps company to ensure their customer is the person whom make the booking and helps customers to feel safe making transaction with airtnt and not fear of identity theft.
